

SUNNY VARMA

Facial Skin Cancer & Benign Lesions

SYNOPSIS

In the UK, the incidence of skin cancer has been increasing, and the number of people diagnosed with melanoma has nearly doubled over the last decade. Dentists and DCPs are in contact with a high volume of patients daily, as well as being in close proximity ideal to be able to spot abnormal skin lesions. Its important to be armed with good knowledge if something looks suspicious or abnormal, or indeed if the patient asks you themselves.

ABOUT THE SPEAKERS

Sunny is Honorary Assistant Professor at the University of Nottingham, School of Medicine and is an NHS Consultant Dermatologist and Mohs Surgeon at the Nottingham NHS Treatment Centre, QMC Campus. Sunny trained in Cardiff and at the Oregon Health and Sciences University, Portland, USA, undertaking a Fellowship in Mohs micrographic surgery, advanced reconstructive techniques and laser surgery. He specialises in Mohs surgery and in the diagnosis and management of skin cancer and has worked in Nottingham for 22 years. Sunny is currently training his 15th Mohs Fellow and has published over 200 manuscripts and abstracts. His private practice is at the Woodthorpe Hospital and Nottingham NHS Treatment Centre. Further information is at dermsurgery.co.uk.

AIMS AND OBJECTIVES

- Increase knowledge of common benign and malignant skin lesions likely to be encountered within dental practice.
- To be able to diagnose the different types of skin cancer, how they present and symptoms associated.
- To be able to assist in the management of such lesions and help facilitate the appropriate referral
